## Vacuum Cleaner HEPA Bags

All Raika vacuum cleaner bags are made of new materials layers, the layers we use have a lot of importance on how the vacuum cleaner will perform on work. Our vacuum cleaner bags are made of 4 spunbond layers and 1 meltblown layer the side stitches are welded by automatic ultra-sonic machines. Some features of our vacuum cleaner hepa bags:

- 1 Our vacuum cleaner bags are made of 4 spunbond layers and 1 meltblown layer
- 2 Our vacuum cleaner bags are produced by automatic machines that insures same size products and quality
- 3 All plastic collars are welded on to the bag by ultrasonic.

## Couplings - Hose - Telescopic Tubes

## Vacuum Cleaner Filters

Air filter is an essential part of a vacuum cleaner that has a significant impact on engine life. Due to its absorbent nature, this part prevents dust and contaminated particles from entering the engine and at the same time prevents them from spreading in the air. Obviously, the air filter becomes full of dust and pollution after a while and becomes clogged. To prevent suction loss, the vacuum cleaner filter should be replaced with a new one after a certain period of time.

### Multifunctional Filter
